**Intended Use:**
For In Vitro Diagnostic Use

p40 (M) [BC28] is a mouse monoclonal antibody that is intended for laboratory use in the qualitative identification of p40 protein by immunohistochemistry (IHC) in formalin-fixed paraffin-embedded (FFPE) human tissues. The clinical interpretation of any staining or its absence should be complemented by morphological studies using proper controls and should be evaluated within the context of the patient’s clinical history and other diagnostic tests by a qualified pathologist.

**Summary and Explanation:**
The mouse monoclonal antibody p40 [clone BC28] recognizes an epitope unique to the p40 protein. p40 is selectively expressed in lung SCC, offering an opportunity for improved specificity (1), resulting in diminished reactivity in lung ADC and increased specificity.

The mouse monoclonal anti-p40 [BC28] demonstrated high sensitivity and specificity, staining 97% (65/67) of cases of lung SCC and 0% (0/71) of cases of lung ADC (see Performance Characteristics). p40 has also been reported in combination with TTF (0/71) of cases of lung ADC (see Performance Characteristics). p40 has also been reported in combination with TTF (0/71) of cases of lung ADC (see Performance Characteristics).

Changes in expression of p40 have been implicated in other neoplastic tissues, including bladder, prostate, and head and neck cancers (1,2,3). p40 (M) [BC28] was found to be a sensitive marker in each of these tissues (see Performance Characteristics). Studies have supported the routine use of p40 as an alternative for p63 (1-4).

The mouse monoclonal antibody p40 [clone BC28] is intended for use with the VALENT. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Manager should be programmed as follows:
- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.
- **Pretreatment:** Perform heat retrieval at 98°C for 60 minutes using Val AR-Hi pH, 5X (use at 1X).
- **Peroxidase Block:** Block for 10 minutes with Val Peroxidase Block.
- **Polimer:** Incubate for 10 minutes with Val Universal Polimer.
- **Chromogen:** Incubate for 5 minutes with Val DAB.

**Protocol Recommendations (VALENT® Automated Slide Staining Platform):**
VLTM3066 is intended for use with the VALENT. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Manager should be programmed as follows:
- **Deparaffinization:** Deparaffinize for 8 minutes with Val DePar.
- **Pretreatment:** Perform heat retrieval at 98°C for 60 minutes using Val AR-Hi pH, 5X (use at 1X).
- **Peroxidase Block:** Block for 5 minutes with Val Peroxidase Block.
- **Polimer:** Incubate for 10 minutes with Val Universal Polimer.
- **Chromogen:** Incubate for 5 minutes with Val DAB.

**Counterstain:** Counterstain for 5 minutes with Val Hematoxylin.

**Protocol Recommendations (intelliPATH FLX® and manual use):**
- **Peroxidase Block:** Block for 5 minutes with Peroxidase 1.
- **Pretreatment:** Perform heat retrieval using Diva Decloaker. Refer to the Diva Decloaker product data sheet for specific instructions.
- **Protein Block (Optional):** Incubate for 5-10 minutes at RT with Background Punisher.
- **Primary Antibody:** Incubate for 30 minutes.
- **Secondary:** Incubate for 10 minutes with Mouse Secondary.
- **Linker:** Incubate for 10 minutes with Universal Linker.
- **Polimer:** Incubate for 10 minutes with Val Universal Polimer.
- **Chromogen:** Incubate for 5 minutes with Val DAB.

**Counterstain:** Counterstain with hematoxylin. Rinse with deionized water. Apply Tacha’s Bluing Solution for 1 minute. Rinse with deionized water. intelliPATH FLX Automated Slide Stainer: IPI3066 is intended for use on the intelliPATH FLX. Refer to the User Manual for specific instructions for use. When using the intelliPATH FLX, peroxide block with intelliPATH FLX Peroxidase Blocking Reagent (IPBS000) may be performed following heat retrieval.

**Technical Note:**
This antibody, for intelliPATH FLX and manual use, has been standardized with MACH 4 detection system. Use TBS for washing steps.

**Source:** Mouse monoclonal

**Species Reactivity:** Human; others not tested

**Immunogen:** a synthetic peptide corresponding to amino acids 5-17 of human p40

**Clone:** BC28

**Isotype:** IgG1

**Protein Concentration:** Call for lot specific Ig concentration

**Epitope/Antigen:** amino acids 5-17 of p40

**Cellular Localization:** Nuclear

**Positive Tissue Control:** Lung squamous cell carcinoma

**Known Applications:**
Immunohistochemistry (formalin-fixed paraffin-embedded tissues)
Protocol Recommendations (ONCORE™ Automated Slide Staining System):
OAI3066 is intended for use with the ONCORE. Refer to the User Manual for specific instructions for use. Protocol parameters in the Protocol Editor should be programmed as follows:

- **Protocol Name:** p40
- **Protocol Template (Description):** IHC Extras Template
- **Dewaxing (DS Option):** DS Buffer
- **Antigen Retrieval (AR Option):** AR1, High pH; 103°C
- **Reagent Name, Time, Temp.:** p40, 30 min., 25°C

- Use of **Mouse Amp HRP Detection (OR16050) is required** for the above antibody protocol. Mouse HRP Detection (ORI6007) is not recommended.

Protocol Recommendations (Ventana BenchMark XT / ULTRA):
AVI3066 is intended for use with the BenchMark XT / ULTRA. Refer to the User Manual for specific instructions for use. Recommended protocol parameters are as follows:

- Using **ultraView on XT / ULTRA:**
- **Template/Detection:** ultraView DAB
- **Pretreatment Protocol:** CC1 Mild
- **Primary Antibody:** 32 minutes, 37°C
- **ultraBlock (V-Blocker BR14001):** Incubate for 4 minutes (with appropriate Option # registered by user)
- **V-Blocker** is recommended to be applied prior to any detection system.

- Using **OptiView on ULTRA:**
- **Template/Detection:** OptiView DAB IHC
- **Pretreatment Protocol:** CC1 64 minutes
- ** Peroxidase:** Pre Primary Peroxidase Inhibitor
- **Primary Antibody:** 32 minutes, 36°C

Performance Characteristics:
Nuclear staining of p40 (M) [BC28] was observed in 97% (65/67) of cases of lung squamous cell carcinoma, with no staining observed in lung adenocarcinoma cases (n=71). Staining of p40 (M) was also observed in 85.5% (41/48) of cases of urothelial carcinoma and 78% (46/59) of cases of head and neck squamous cell carcinomas. In breast cancers, only myoepithelial cells in ductal carcinoma in situ (DCIS) stained with p40 (M). No cases of prostate cancer were found to be positive with p40 (M); p40 (M) [BC28] nuclear staining was observed in the expected normal tissues: basal cells in prostate, myoepithelial cells in breast, urothelial cells in bladder (but not umbrella cells), stratified epithelial cells in skin, tonsil, esophagus and cervical mucosa, occasional cytotoxophoblasts in placenta. (Table 2).

Limitations:
The optimum antibody dilution and protocols for a specific application can vary. These include, but are not limited to fixation, heat-retrieval method, incubation times, tissue section thickness and detection kit used. Due to the superior sensitivity of these unique reagents, the recommended incubation times and titers listed are not applicable to other detection systems, as results may vary. The data sheet recommendations and protocols are based on exclusive use of Biocare products. Ultimately, it is the responsibility of the investigator to determine optimal conditions.

Quality Control:

Precautions:
1. This antibody contains less than 0.1% sodium azide. Concentrations less than 0.1% are not reportable hazardous materials according to U.S. 29 CFR 1910.1200, OSHA Hazard communication and EC Directive 91/155/EC. Sodium azide (NaN₃) used as a preservative is toxic if ingested. Sodium azide may react with lead and copper plumbing to form highly explosive metal azides. Upon disposal, flush with large volumes of water to prevent azide build-up in plumbing. (Center for Disease Control, 1976, National Institute of Occupational Safety and Health, 1976) (5)
2. Specimens, before and after fixation, and all materials exposed to them should be handled as if capable of transmitting infection and disposed of with proper precautions. Never pipette reagents by mouth and avoid contacting the skin and mucous membranes with reagents and specimens. If reagents or specimens come in contact with sensitive areas, wash with copious amounts of water. (6)
3. Microbial contamination of reagents may result in an increase in nonspecific staining.
4. Incubation times or temperatures other than those specified may give erroneous results. The user must validate any such change.
5. Do not use reagent after the expiration date printed on the vial.
6. The SDS is available upon request and is located at http://biocare.net.

Troubleshooting:
Follow the antibody specific protocol recommendations according to data sheet provided. If atypical results occur, contact Biocare’s Technical Support at 1-800-542-2002.
